

Focchi – Multifunctional prefabricated facade

Focchi is offering a multifunctional prefabricated façade integrating different services for achieving nZEB balance and optimal IEQ. It integrates heating/cooling pump, heat recovery and ventilation systems embedded in the envelope, and it is applicable to both new and existing buildings. The multifunctional prefabricated façade includes IoT components for real time monitoring for actuations to energy efficiency, comfort, wellbeing and IEQ actions enabled by a dedicated platform.

Focchi offers additional functionality and better performance than comparable standard products.

It requires an ethernet and electrical connection and cannot be installed on brickwork. The product can be used for residential, educational, institutional and business types of buildings. The product is climate independent.
